WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 720 mm of 60 x 40 x 2 mm tube; square and deburr the ends.

Lay it with a 60 mm face up. All holes 6.5 mm.

Gusset bolt holes, horizontal through both 40 mm sides, at mid-height: 20 mm and 75 mm in from each end.

Turntable bolt holes, vertical through top and bottom: four holes, 45 mm each side of the centre and 15 mm each side of the centre line.

Slide a 6 mm bore aluminum crush sleeve into each bolt hole pair (cut to the inside height) so bolts do not crush the tube.

Fit: sits flat on the turntable disc, held by four M6 bolts into the disc's tapped holes; the arms stand on its ends.

Check: holes in line; the tube lies flat on the disc.

HelioLite crossbar: making sketch
