WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 160 x 160 mm from 8 mm plate; break the edges.
Centre hole 16 mm for the azimuth shaft.
Flange screws: four holes drilled 6.8 mm and tapped M8 on a 105 mm circle at 45 degrees (37.1 mm each way from the centre).
Check against your floor flange's holes before drilling.
Gearbox screws: four 6.6 mm holes on a 44 mm square (22 mm each way), countersunk from the underside so the heads sit flush.
Hall post screw: one M4 tapped hole 54 mm from the centre, on the line through the centre square to the motor (top view).
Fit: the gearbox sits on the top face (screws first, from below); the plate then sits on the floor flange, held by four M8 screws up through the flange into the tapped holes.
Check: the shaft passes the centre hole without touching.

HELIOLITE
