WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a 120 mm disc from 10 mm plate (or buy a blank); face both sides flat.

Centre hole 30 mm, a close fit on the hub's boss.

Hub screws: four 5.5 mm holes on a 40 mm circle at 45 degrees, countersunk from the top so the crossbar sits flat over them.

Crossbar bolts: four holes drilled 5 mm and tapped M6, 45 mm each side of the centre and 15 mm each side of the centre line.

Homing magnet: a 6 mm hole 3 mm deep in the underside, 54 mm from the centre on the crossbar's centre line (glue it in).

Fit: the hub screws to its underside; the crossbar bolts to its top; the whole turns on the azimuth shaft.

Check: the disc runs flat within 0.3 mm at its rim when turned on the shaft.
