P1	Making sketch for the prototype build plan	2026-10-01	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Print a post 16 x 16 mm and 64 mm tall with a 4.5 mm hole down its centre, counterbored 8 mm from the top for the screw head.

Fit: one M4 screw down through the post into the tapped hole in the cap plate, 54 mm from the shaft centre.

Glue the Hall switch (12 x 12 x 5 mm) on top, sensing face up. Its face sits 4 mm under the turntable disc, under the magnet when the yoke points at azimuth zero.

Run its lead down the post with the motor lead.

Check: turn the disc by hand: the switch changes state as the magnet passes, and nothing rubs.
